

```
void walk_range(mm, addr, end) {  
    addr_lock *lock = addr_lock_range(mm, addr, end);  
    te_iter *i = tentry_iter_start(mm, addr, end);  
    while (tentry_iter_has_next(i)) {  
        size_t size;  
        tentry *te = tentry_iter_next(i, &size);  
        ...  
        // a custom function to update entries  
        err = ops->tentry(te, addr, addr + size, walk);  
        addr += size;  
        ...  
    }  
    tentry_iter_end(i);  
    addr_unlock_range(lock);  
}
```

Single batched lock

Able to delegate work

a custom function to update entries
