

```
for (; addr < cend; addr += PAGE_SIZE) {  
    mincoreinfo = pmap_mincore(pmap, addr);  
    ... // Get page m from addr  
    if (m != NULL) {  
        if (... && pmap_is_modified(m))  
            ...  
    }  
} /* sys/vm/vm_mmap.c */
```

pmap_mincore() needs to walk the page table in every loop iteration

pmap_is_modified() needs to walk the page table again.
