

```
// pmap interface
```

```
// N(iter) * 2 walks for Radix and ECPT
```

```
int kern_mincore(...) {
```

```
...
```

```
for (; addr < cend; addr += PAGE_SIZE) {
```

```
    mincoreinfo = pmap_mincore(pmap, addr, &pa);
```

```
    ...
```

```
    // Get page m from addr
```

```
    ...
```

```
    if (m != NULL) {
```

```
        if (... && pmap_is_modified(m))
```

```
            ...
```

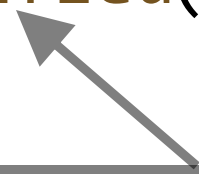

```
    }
```

```
}
```

```
} // from sys/vm/vm_mmap.c
```

Need to walk everytime

No pointer
Need to rewalk the table
